

AMENDMENTS TO THE ABSTRACT

Please delete the Abstract, and replace it with the following.

13 Reflexotherapy device to stimulate reflex points of the human body provide reliable and integral fastening of needles within an elastic base member to achieve a stable position of needles under any conditions of utilization of the device, and to carry out both static and dynamic impact on extensive areas of reflex zones. The device comprises elastic base member 1 with needles 2 fastened therein, each needle being provided with thickened end 3, and sharpened end 4 protruding from base member 1. In one embodiment the needles are fastened in the course of curing of the integral structure, and in another embodiment the position of needles 2 is fixed, so that thickened ends are disposed between two layers to be joined together.
